Dreer's Guide to Autumn Gardening

It's much to your advantage to order early though you may not intend planting for a few weeks. You are then certain of receiving all the things you want this fall. The dates given below necessarily must be approximate as they depend upon climatic conditions. Where winter sets in early plant as soon as possible.

August

This is the month to plant the fall-flowering bulbs like Colchicum and Sternbergia. Liliun candidum also does well if planted at this time. Early August is a good time to start Pansy seed and seed of other quick growing biennials.

Late August or early September is the best time to start a new lawn or reseed the old one.

September

It is still time to plant the bulbs of Colchicum and Sternbergia. The earlier they are planted now the better they will be. If you did not sow your new lawn or repair the old one during late August do so now or as soon as possible. This is the most important month for planting bulbs in the garden to bloom next spring including Narcissus, Anemone, Brodiaea, Calochortus, Camassia, Spring Crocus, Erythronium, Leucojum, Liliun candidum, Eremurus, Muscari, Ranunculus, Scilla, Spring Starflower (Triteleia), and Iris reticulata. Late in the month plant Dutch and Spanish Iris. Start Lilies indoors, also Calla, Baby Gladiolus, Freesia, Ixia, Lachenalia, Leucocoryne, Ornithogalum, Sparaxis. Where winter sets in early sow the seed of hardy perennials marked in this catalog *. Where winter is a long way off other quick growing perennials can still be started from seed.

October

All the bulbs recommended for September planting can still be started this month as long as the ground is not frozen. But even in colder sections October planting is possible where the soil in the beds has been covered with leaves, straw, corn stalks, or any other loose matter that will keep the frost out until the bulbs or plants are available. *October is the most important month for planting Tulip bulbs.* Continue indoor planting of all bulbs that will bloom in the house during the winter and spring. By the middle of the month perennial plants, shrubs, and climbers are available and during the latter part dormant Roses should go in the ground. Just before the soil in the seed bed or cold frame freezes sow seed of the perennials marked with a + in this catalog. By the middle of the month begin your first planting of Paper White Narcissus, Soleil d'Or Narcissus, and Chinese Sacred Lily indoors. Make sure you have sufficient bulbs of these to make succession plantings two weeks apart until mid-March. Also start Gloriosa, the beautiful Climbing Lily, indoors now. *This is the month to plant hardy Lily bulbs.*

November

Continue planting Lilies throughout this month. There is still a chance to plant the many types of bulbs recommended for September and October planting, also perennial plants, shrubs, climbers and Roses, as long as the ground is free from frost.

December

Throughout December start bulbs of Paper White Narcissus, Soleil d'Or Narcissus, Chinese Sacred Lily, Amaryllis, Lily of the Valley Pips, and all tender bulbs for blooming indoors in the house.

A Bulb Tonic for Plus Value Next Spring

Always a leader in quality and service Dreer offers a special Plus Value, at no cost this Autumn season, with all bulb orders amounting to \$1.00 or over.

We could not improve the quality of our bulbs, but we have found a way to help these bulbs produce greater root growth with sturdier foliage and larger, more abundant blooms.

Allantoin, a recent scientific discovery originally applied in human therapeutics, has been found to

be equally efficient in promoting cell development and growth in plant life. This element combined with other known health-promoting and nourishing properties makes PROLIFEROL invaluable to bulb growers.

With each shipment of bulbs for a dollar or over selected from Dreers 1941 Bulb Catalog, enough PROLIFEROL will be furnished to make one full gallon of solution sufficient to treat 100-150 bulbs. Results will far exceed your expectations. Do not fail to use this plus tonic which has the following merits.

1. An important cell proliferant which stimulates healthy tissue growth.
2. A powerful initiator which is an efficient plant hormone (hastens root development).
3. Micrometabolic elements necessary to keep the physiological functions of the plant in healthy condition—an invaluable characteristic.
4. Nutritious elements sufficient to feed bulbs and plants until sufficiently rooted to obtain sustenance from the soil.

Use PROLIFEROL in the fall and when the bright sunshine of early spring warms the ground the nourished and established root growth will send up stronger, sturdier plants with more prolific flowers.

Glorious Bulbous IRIS DUTCH, SPANISH, & ENGLISH

These Hardy Iris must be planted in the Fall

Iris will give your garden a maze of sparkling splendor—and is the garden really complete without these dainty touches of color?

These Iris differ from the Bearded and Japanese by producing bulbs instead of rhizomes. These must be planted in the fall, the earlier the better and they have proved quite hardy. Where winters are very severe they should be covered deeply with straw, hay, or leaves. Excepting the English Iris they form foliage in the fall with the leaves persisting throughout the winter. Cover the bulbs 4 to 6 inches deep.

Late Autumn is SHRUB PLANTING TIME

Give your home an atmosphere of cozy charm with a few well chosen shrubs. A few dollars spent for some of the rarer shrubs will add an air of serenity and restfulness that will give distinction to your home grounds. Late autumn is the ideal time to plant shrubs. They usually can be dug after the middle of October and where frost enters the ground previous to that time a few burlap bags, hay, straw, or manure will keep the soil workable until the plants arrive.

As growth varies according to conditions we give the approximate height as follows: D = Dwarf (less than 4 feet tall); M = Medium (4 to 8 feet tall); T = Tall (8 feet and more).

Our Shrubs are Too Heavy to be Sent by Mail

They are shipped by Express or Freight at purchasers' expense. No charge is made for packing or delivery to the Express, Freight, or Steamship lines in Philadelphia. The sizes given are those of the plants when shipped to you.

Perennial Flower Seeds

For Autumn Sowing

**All Flower Seeds
are Sent Postpaid**
to any Post Office in the United
States or its possessions

Early autumn is a favorite time with many gardeners to sow perennial flower seeds. To hasten them along a cold frame or a similar temporary structure should be used.

Those marked * give best results if the seed is sown late in the fall. They need the action of frost to sprout freely during the coming spring.

To help our customers in selecting varieties for the rock garden we have used the symbol Δ to identify them at a glance. These varieties also are splendid for dwarf beds, borders, or for edgings. Plants suited to semi-shade are marked \odot , and those that will grow in deeper shade \bullet . Practically all of these also do well in a sunny position.

Announcing **1941 POLICY ON DREER OWNED PATENTED ROSES**

The American public always has been willing to pay an extra premium for new and distinctive patented articles in the belief that the originator or inventor is entitled to a fair reward for his efforts and creations. Mainly for this reason, most patented roses have been priced much higher than non-patented varieties.

Dreer shares the public's belief that a patentee is entitled to a return for his effort and discovery. But, that return must be fair when paid by the public. It must not be excessive.

During recent years rose patents have been granted on varieties which, though somewhat different, did not turn out as decided improvements over non-patented varieties judged from

the standpoint of the average home gardener

The result of so many patents has been to confuse the rose buying public and maintain an artificial price level much higher than the quality of the rose should normally merit.

As it always has been a fundamental Dreer policy to base the price on the true intrinsic value and quality of the product rather than a price forced superficially high, and

As many non-patented roses are equal to, if not superior, in quality to those patented—

We believe the time has come to tell our customers frankly that, in our opinion, a 15c premium return for a justified patented rose is fair to the originator and fair premium for the rose buying public to pay.

Therefore, in adopting this policy

**All Dreer owned patented roses in this 1941 catalog
are reduced to \$1.00 each.**

**Furthermore our latest and most popular patented
varieties are included in this drastic reduction.**

*Unfortunately we are obliged to charge for patented roses, on which we do not own the patent,
the price set by the patent owner to which we must adhere.*

18-225 R. M. S. Queen Mary

(H. A. Verschuren, 1937). Plant Patent No. 249. The tremendous enthusiasm expressed by thousands of Rose enthusiasts when this magnificent Rose was first introduced is now shared by practically all gardeners. R. M. S. Queen Mary certainly is beautiful beyond description—distinct from anything yet seen in Roses. Its color is a glorious combination of vivid shades blending rich glowing salmon with an exquisite pure pink and orange base. The buds are long and pointed, and the gracefully formed flowers have an intriguing fragrance. Awarded 4 Gold Medals and 3 First-Class Certificates in Europe and U. S. A. \$1.00 each; \$10.00 per doz.

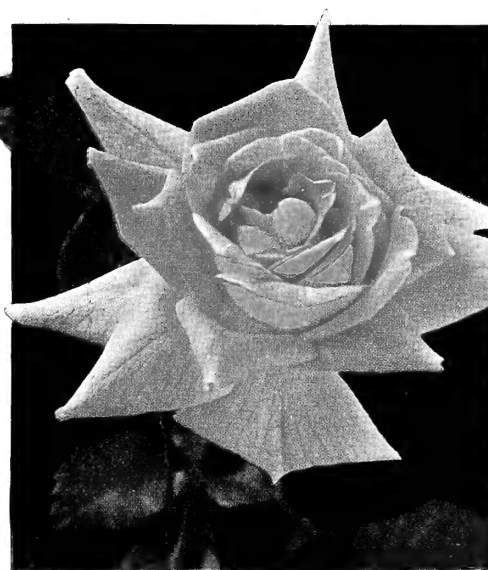

18-028 Crimson Glory

(Kordes, 1934) Plant Patent No. 105. The most famous of all red Roses. Makes a vigorous plant with abundant disease-resistant deep green foliage. Of compact growth, well-branched and symmetrical. Bears a profusion of large urn-shaped buds which open to shapely flowers of an intense, deep, vivid, non-fading crimson shaded with deep red and mellowed by a velvety nap. Awarded 2 Gold Medals; 1 Silver Medal; and a Certificate of Merit. \$1.00 each; \$10.00 per doz.

18-168 Mrs. Oliver Ames

(H. A. Verschuren, 1941) Patent Pending. This takes its place among the most fragrant of all modern Roses. Of upright growth bearing an abundance of well-formed mellow chrome yellow blooms with a silvery sheen at the petal tips. \$1.00 each; \$10.00 per doz.

18-204 Orange Nassau

(H. A. Verschuren, 1941) Plant Patent No. 350. Certainly one of the most attractive Roses ever introduced as the brilliant orange color of the inside of the petals gives a superb contrast to the chrome yellow on the outside. Blooms very early. \$1.00 each; \$10.00 per doz.

If Roses are wanted by mail please add to your remittance 10% (15% west of the Mississippi) of the catalog price to cover postage and special packing. Minimum charge 10 cents.
